## What is a Master Key System?

A Master Key System is the purest form of

### ACCESS CONTROL

A High Security Restricted Master Key System offers numerous benefits over standard Master Key Systems.

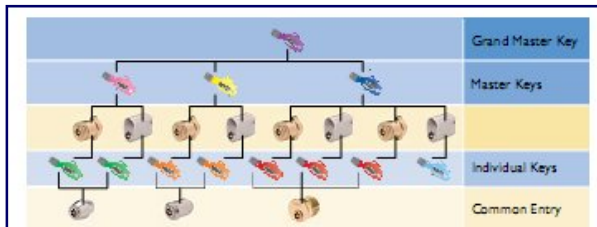

Master Key Systems should play an integral role in any access control system, including electronic systems... Talk to us today as to how we can improve your security system with Galaxy Master Key Systems.

Only recorded **authorized persons** can order cutting of keys.

**Patent Protection** over the design and manufacture of system components.

**Distribution Protection**, limiting the number of outlets licensed to produce a particular Master Key System.

**Pick and Bumping** resistance preventing unauthorized entry.

## Choose Frank O'Neill Group to build and manage your Restricted Master Key System

~ Operating since 1965 ~

~ Qualified licensed locksmiths ~

~ Member of the M.L.A.A. ~

Master Locksmiths Association of Australasia

upholding the MLAA code of ethics and code of conduct

[www.masterlocksmiths.com.au](http://www.masterlocksmiths.com.au)

Strict security is maintained over the management of restricted key system product and information.

Product is stocked to ensure the efficient supply of key orders and system extensions.

Frank O'Neill Group proudly endorse and supply...

316 stainless keys

## Important Information You Need To Know

### Transferring Master Key System Issues

Not all restricted key systems can be transferred from locksmith to locksmith.

Transferable key systems do entail transfer fees.

When purchasing a restricted key system the client is buying the product hardware not the system intellectual property used to design and create a restricted key system.

It is the system intellectual property that is transferred to locksmiths.

A client cannot purchase the intellectual property for themselves.

Before transferring a system it is important to confirm that the new locksmith is capable of holding the relevant intellectual property.

### Patent Protection

Restricted keys systems offer the client a patent protection on the manufacturing of the key system components.

There is a limited time (normally 20years) that this patent protection is effective.

We recommend that a system should be updated every 10 to 15 years to ensure the integrity of the system and maintain the longevity protection of patents.

We recommend upgrading out of patent systems as the manufacture of product may cease at some point after the expiration of the patent.

### Keeping Records

Although Frank O'Neill Group will do the utmost to maintain the integrity of all restricted master key systems, the onus is squarely on the system user to maintain the true integrity of the system.

Important record keeping functions of who's been issued keys, which keys, and when returned... Records on changes to doors, which keys operate the doors etc.

Frank O'Neill Group recommend the purchase of ProMaster Key Manager software for this specific purpose. The software also enables tracking of key orders, contains a key registry and door schedule.
